
SUPERFLOAT™ Float Drums

SUPERFLOAT™ FLOAT DRUMS (Manufactured by Ace Rotomold)

All units are manufactured from linear virgin polyethylene resin containing UV inhibitors and carbon black pigment to protect against ultra violet deterioration. These resins offer a balance of toughness, rigidity, environmental stress crack resistance and low temperature impact performance. Resin is also in compliance with the FDA title 12. This is a food grade material that will not contaminate the waterways. All float drums are rotational molded for seamless one-piece construction. The encasement meets the "Hunt" Falling Dart/Puncture and Thickness Test – resistant to damage by animals and will not sink or contaminate the water when punctured. The content of the encasement meet the "Hunt" Water Absorption Test – content is foam bead (EPS) flotation with a 1.0-1.5 lbs. Per cubic foot density with water absorption not to exceed 3 lbs. per cubic foot. Nominal wall thickness is 0.150 on all flotation encasements. Thicker walls available as special order. Resin will exhibit resilience against ice, bumps by watercraft, and contact deterioration from petroleum products. The encasement is recyclable.
