

Rolyan Lighted Buoys

ROLYAN LIGHTED BUOYS

The Rolyan Lighted Buoys are sturdy, stable ABS buoys that are filled with urethane foam. They are unsinkable, shatterproof, and ultraviolet inhibited for weather resistance. The standard colors are solid white, green, red or black on white with a 3" reflective band. Symbols, messages and red or black vertical stripes are available for white buoys. An approved J.A. McDermott type buny light assembly is available for medium or high intensity light. All Rolyan buoys may be ordered with high intensity reflective material at a slight extra cost. Visibility is good up to 1 to 2 miles with white flashing high intensity light, up to a half mile for green or red. The lights are photo-electric cell operated for economy, easily serviced and theft resistant. Color filters are available to change to red, green or amber.
