
Pile Caps

A pile cap is an essential part of a marina's equipment. It dresses up the docking facility, protects the vulnerable top of the piling from water penetration, and discourages birds from perching or nesting on the piling. The pile cap can be secured to wood pilings by a fastener or nail. Henderson Marine 5200 adhesive/sealer should be used on concrete pilings.

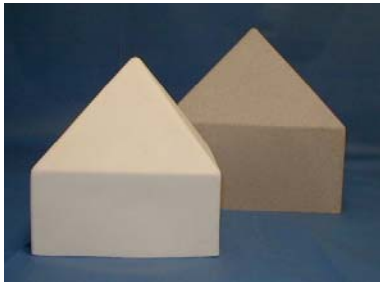

Historically, fiberglass has been used throughout the industry. Due to advances in polyethylene development, the new industry standard is the Henderson Marine Heavy Duty Polyethylene Pile Cap - for price, availability, longevity, and overall superior quality.

Constructed of thick, heavy-duty polyethylene, with 1/8" minimum wall thickness, for long lasting protection. Furnished in white, other colors available, including gray granite, on special production with an upcharge.

ROUND HEAVY DUTY POLYETHYLENE PILE CAP
ITEM NO. 11-035xx

Sizes available: 12", 13", 14", 15", 16", 18", 20"

SQUARE HEAVY DUTY POLYETHYLENE PILE CAP
ITEM NO. 11-035xxSQ

Sizes available: 12", 14", 18", 20"

OCTAGONAL HEAVY DUTY POLYETHYLENE PILE CAP
ITEM NO. 11-035xxOCT

Size available: 24"
